

# **Cumulative ongoing pregnancy rates after IUI and investigation of factors affecting drop-out**

**Kim Van Hoof, Diane De Neubourg, Monique Elseviers,  
Ingrid De Pauw, Willy Eestermans**

**Middelheim hospital, Antwerp, Belgium**

# INTRODUCTION

---

## **IUI:**

**frequently and widely used ART technique**

**easily offered, no stringent laboratory requirements**

**highly accepted**

**success expressed as (ongoing) pregnancy rate per cycle**

# AIMS

---

- 1. to investigate the treatment from the patients' point of view**
- 2. to investigate the factors and reasons for drop-out**

## MATERIALS AND METHODS

---

- 1. 724 patients starting IUI treatment during a ten year period (1999 – 2008)  
data retrospectively retrieved from database  
subjected to survival analysis (Kaplan-Meier)**
- 2. cross-sectional study with a semi-structured questionnaire sent to patients  
who stopped all treatment for longer than 6 months (1/3/2007 – 1/2/2008)**

## RESULTS: Number of inseminations per cycle

**Cycle 1: 724  
inseminations (100%)  
81 pregnant,  
12 miscarriage.**

**Cycle 3: 370  
inseminations (49%)  
35 pregnant,  
6 miscarriage.**

**Cycle 6: 36  
inseminations (5%)  
2 pregnant,  
1 miscarriage.**

## RESULTS: Cumulative ongoing pregnancy rate

## RESULTS: Cumulative ongoing pregnancy rate for first and second child

## RESULTS: Factors and reasons for drop-out

---

- **39 patients stopped every type of treatment**
- **Response rate = 50%**
- **Mean age: 31 years**

## **RESULTS: Reasons for drop-out (N = 19):**

---

- **perceived poor prognosis: 9**
- **negative emotional reactions: 7**
- **lack of support: 6**
- **financial reasons: 6**
- **spontaneous pregnancy: 4**
- **adverse physical reactions: 1**

## CONCLUSIONS

---

- 1. 59% of patients starting IUI treatment had an ongoing pregnancy after 6 cycles**
- 2. Although generally perceived as a treatment with minimal effort and side effects, half of the patients who dropped out of all treatment experienced negative reactions and emotions**

## Results: Cumulative ongoing pregnancy rate after one year
